

Welcome at the web server of the Chair of Structural Analysis of the [Faculty of Civil Engineering](#) in Skopje. Here you can find current information about teaching courses, staff members and research activities of our Chair

Main teaching disciplines at the Chair of Structural Analysis are classical and matrix methods for static and dynamic calculation of determined and undetermined structures. Special attention is given to the numerical modeling of real engineering structures by using the latest software packages in the world.

The Chair also gives courses in informatics, programming languages, numerical methods in Civil Engineering, FEM, seismic design of structures. Thus, students are trained to define and solve the tasks connected with analysis of different types of structures.
